## **Mission statement**

Dear Secretary, dear members of the EPC Council,

I decided to present my candidature as EPC representative in the UEG PAC after a long reflection.

I had the honor and privilege in the last Years to serve the EPC first as councilor and then as member of the UEG FTC. I have to say that these experiences were for me fantastic and very important. I first organized inside to the EPC a group for young pancreatologist (YOUPIIE) and then an EPC-UEG European Study Group on Cystic Tumors of the Pancreas. From this experience we were able to publish the new European Guidelines on Cystic Tumors of the Pancreas and now we have ongoing 6 multicentric studies on this topic.

Anyway, what I realized in these Years is that pancreas still remains an orphan organ. Even if pancreatology is one of the most productive discipline in gastroenterology (from scientific point of view), even if pancreatic diseases have a big impact on the public health and, for many of them, there is not chance to be cured, there is not a big interest from companies or politics to offer us the resources to improve our results.

For this reason I decided to offer my enthusiasm and my determination to increase the visibility and weight of Pancreatology among the general public, as well as specialists and politicians.

If I will have the honor to represent all of us in the PAC of the UEG, my primary goal will be “to be our voice” outside from the room of the congress or outside from the room of specialists. I will try to transform the EPC philosophy and messages in something easy to be understood by other colleagues, general public and politicians. My mission will be to inform and to promote pancreatology at every level: general practitioner, other specialist, general public, companies, politicians. Trough a correct information I hope we will improve the knowledge in pancreatology at every levels, we will be able to obtain more investment in research (EU founding, EU politics strategies, private founding, involving foundation, etc) and a different specific weight at UEG and politic level. At the same time I hope also we will be able to extend our presence in the media to give to the citizen the possibility to know more about pancreatic disease, the treatment and the prevention.

At the same time, coherently with my philosophy and my previous initiatives, I would like to promote as much is possible the young pancreatologist in Europe. Our younger colleagues are generally the weak part of the chain. I would like promote founding for the best younger researcher and promote initiatives (like for example Pancreas 2000) that have as a main goal, the development and the help to young pancreatologist in Europe.
